

Abstract

A preferred embodiment of the subject invention comprises a method for scheduling call consultations, comprising: receiving an electronic request from a first participant for one or more on call dates; assigning one or more on call dates to the participant; and notifying potential callers of the first participant's on call dates and qualifications. In other embodiments, the invention comprises the method above, as well as: receiving electronic feedback information from one or more callers who have called the first participant during the one or more assigned on call dates; and recording the feedback information in an electronic database and/or assigning the participant to a group associated with a topic. In a further embodiment, the method comprises associating the participant with a topic, wherein a predetermined number of callers have expressed interest in the topic, and wherein the participant has received positive feedback for calls related to the topic.
